Dr. Shikha Tuteja

Department of Computer Science and Engineering,
Chitkara University, Punjab

- Educational institutions organize multiple events throughout the year
- Traditional event management systems are often manual and inefficient
- Students face difficulty in discovering and registering for events
- Organizers struggle with attendance management and communication
- Eventization simplifies event management using modern web technologies and AI features

PROBLEM STATEMENT

- Lack of centralized event management platform
- Manual event registration processes are inefficient
- Students miss important event updates and announcements
- Difficulty in managing attendance during large events
- Poor communication between organizers and participants

OBJECTIVES

- Develop centralized event management system
- Provide event discovery and registration features
- Implement QR-code-based attendance verification
- Monitor and track event participation and analytics
- Enable real-time notifications and communication
- Improve student engagement through intelligent features

SYSTEM OVERVIEW

- Full-stack web application based on MERN architecture
- Frontend ensures interactive and responsive UI
- Backend handles business logic and data management
- Database stores user, event, registration, and analytics data
- AI chatbot provides intelligent assistance and recommendations

KEY FEATURES

- AI Chatbot: Intelligent query handling and user assistance
- Event Recommendation System: Smart event suggestions for users
- QR Verification System: QR-based attendance management
- Real-Time Notifications: Instant updates using Socket.io
- Analytics Dashboard: Participation stats and performance tracking
- User Authentication: Secure login and role-based access system

Backend

- Node.js (runtime)
- Express.js (API handling)
- MongoDB (database)

Frontend

- React (UI framework)
- TailwindCSS (styling)
- Axios (API communication)

AI Module

- MediaPipe Pose
- Real-time landmark detection

- Client-Server Architecture
- Frontend communicates with backend via REST APIs
- Backend processes requests and interacts with database
- AI module runs on client side for privacy
- Data flow ensures scalability and performance

MODULES

- **Authentication Module** → Login & security
- **Event Module** → Manage events
- **AI Chatbot Module** → Intelligent assistance
- **QR Module** → Attendance verification
- **Analytics Module** → Reports & tracking

WORKING OF SYSTEM

- User logs into the system
- Dashboard displays stats and schedules
- User searches and registers for events
- AI chatbot provides recommendations and assistance
- QR code generated after successful registration
- Analytics dashboard stores and tracks participation data

RESULTS

- Successful centralized event management system
- Improved event registration and participation process
- Effective QR-based attendance verification
- Real-time notifications enhanced communication efficiency
- Smooth system performance with minimal latency

FUTURE SCOPE

- Mobile application development
- Advanced AI-based event recommendations
- Advanced data analytics and visualization
- Multi-language support
- Cloud deployment and scalability improvements
- Multi-campus event management support

CONCLUSION

- Eventization provides a complete event management solution
- Combines AI with modern web technologies
- Improves communication and participation management
- Scalable and adaptable for future expansion
- Demonstrates real-world application of intelligent systems

Thank You
